БЕЛЕЖКИ

he GAL-K XL is a mounted disc harrow designed for medium-power tractors. A unique feature of the XL series is the three-section frame folding mechanism, whilst other MANDAM disc harrows fold into two sections. This ensure s compact transport dimensions for machines with a working width of up to 7.5 m, without the need for a spec ial transport chassis, which is required for machines with widths of 8, 10 and 12 m. The roller sections have an independent folding mechanism, which provides additional stability to the entire structure. The distance between t he rows of discs has been increased to 1,000 mm, which improves performance in difficult conditions. Hydraulic working depth adjustment, chassis suspension and wide 620 mm tyres are standard features. MANDAM maintenance-f ree hubs with a 5-year warranty, together with a variety of discs, ensure exceptional operational efficiency. Ten dif ferent rollers and a wide range of other accessories are available, allowing for excellent customisation. Availa ble in working widths of 5 m and 7.5 m.
