БЕЛЕЖКИ

RCW spreaders with HELIX spray patterns are specially designed for the efficient spreading of powdered lime and fertilisers.
They are ideal for large farms and agricultural contractors, ensuring precise distribution of lime across the field and preventing it from being blown away by the wind. Powdered lime is preferred due to its high reactivity, rapid application and low cost, particularly when supplied by tanker. RCW spreaders offer comfort, efficiency and high-quality performance from loading to spreading.
